ABSTRACT

DELIVERY CONTEXT AWARE ACTIVITY ON NETWORKS, DEVICES, SOFTWARE, AND METHODS

5

Software (42) which when run on a processor (40) of a networked resource server (14', 18', 20') reads delivery context aware related data from a contact log of said server and processes said data to produce processed acquired data relating to delivery context aware requests for resources made of the server, and which software causes said processed acquired data to be transmitted out of a network port (58) of the server proactively, without an input trigger signal from outside of the server.
